
Slow manifolds organising mixed-mode dynamics

Bernd Krauskopf^{*1}, Hinke Osinga¹, and Jose Mujica¹

¹Department of Mathematics, The University of Auckland – New Zealand

Abstract

This talk will discuss some mechanisms that give rise to mixed-mode oscillations in slow-fast systems with at least two slow variables. The focus will be on how attracting and repelling slow manifolds interact: locally to create small-amplitude oscillations and globally to give rise to large-amplitude excursions and reinjection.
